

Business Process Automation **Case Study**

HEAL PROCESS WOES WITH AUTOMATION

INDUSTRY: ENVIRONMENT

A solution to

Dynamic Inventory Workflow for major and mid-scale enterprise **Production house.**

Heal Process Woes with Dynamic Production line configuration and execution with inventory management

Client receives tons of cartridges and other carbon contains material from various clients every day.

This raw material then goes from inward, several intermediate processing, sorting and dispatching.

There are various warehouses with different products.

It was getting difficult to make a note that how much material is in which stage of processing, and what is the present state of inventory at each warehouse.

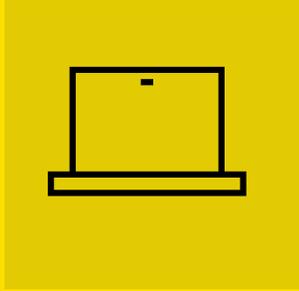

Also, the major challenge is processing gets change and new product variations get introduce anytime.

Solution

Client's engagement with AgileCube began as an urgent need to remedy an unanticipated crisis in Inventory Management and their users including Fork Lift Operators, inward/outward executives, and Production Line Managers.

- A Fully dynamic process setup including customization in inward/outward.
- Process Execution
- Barcode Scanning along with App for Barcode Guns.
- Stillage Configuration based on Quantity and Weight.
- Accessible from Anywhere interface with Web, desktop and iPad.
- Many useful reports to track inventory, inwards, outwards, processes, stillage usage etc.
- System defines alerts like Storage threshold alerts (weight and quantity) is executed based on limit.
- Supplier and recipients can be managed with their contact details and grouped by custom types.
